

Certified AI Manager (CAIM)

South Australia is leading the nation on AI. Give your team the capability and guardrails to lead it – safely, and with confidence.

WHY NOW

South Australia is setting the national benchmark on AI – home to the nation's first Office for AI and Australia's first Royal Commission into Artificial Intelligence. Building that capability now, with the right governance and guardrails, is the sensible, low-risk way for your team to get ahead – and stay safe doing it.

WHAT CAIM IS, AND WHO IT'S FOR

The **Certified AI Manager (CAIM)** is a globally recognised credential for the people responsible for how AI is adopted, governed and used across an organisation – not how it's built. It builds practical capability in AI governance, risk and responsible use.

It's for public sector managers and leaders across the whole department, **not just IT** – policy and program leads, service delivery and operations, corporate, risk, procurement and people teams. Anyone accountable for how AI shows up in their team or program area.

THE TEAM OFFER

- **A team of 20 from your department** – learning together, building shared language and standards
- **10% Meet the Buyer discount** – \$2,250 + GST per person (normally \$2,500 + GST)
- **Online group coaching, tailored to your department** – a dedicated coach across the full 12 months, joined online from wherever your team works
- **Self-paced online**, with a full 12 months to complete – comfortably done within the financial year
- **Globally and CPD-recognised certification**, with an optional post-nominal – recognised development that signals investment in your people, and helps you keep them

Delivered by MCBI – a proudly South Australian organisational development consultancy, based and headquartered in the state for 20 years, helping South Australian public sector teams build capability locally.
